PREMIUM HOOK

With more than 80 years of fishing hook making experience and market intelligence, GW is now introducing this well-researched range of premium hooks to cater to anglers of different fishing segments.

This good representative of wide spectrum of hooks has been specifically identified and selected. They formed the cornerstone of this new program and is targeted to suit various types of fishing methods, conditions and situations that will satisfy the myriad requirements of every demanding angler's expectations.

The range will be expanded to include more models and patterns and will roll out in phases in the future to be more comprehensive!

AERODYNAMIC POINT

AERODYNAMIC POINT

Of all the functions of a fishing hook, the hook point is recognized and termed by anglers as the top-most critical function. This is because hook point is the last point on the entire fishing tackle system where it engages with the fish. It is with this belief in mind, GW has introduced this bespoke hook point that is uniquely shaped to minimize friction and resistance, for fast and instantaneous penetration, it stays sharper and stronger by 10~15% than any traditional standard points.

FORGED POINT

This special cold forged point is the showcase of achieving the optimum ratio for sharpness and strength. The streamlined and extended point length configuration give the extra push for speedier penetration yet preserving its holding strength – without the worry of point/tip being rolled-over.

SERRATED BODY

This special cold forged serration body transforms the material grain flows into a desirable pattern to serve two important enhancements. One is to increase the hook strength by 10~15% and the other is to keep the bait/lure in place for much longer than usual.

ANTI-SLIP SPADE

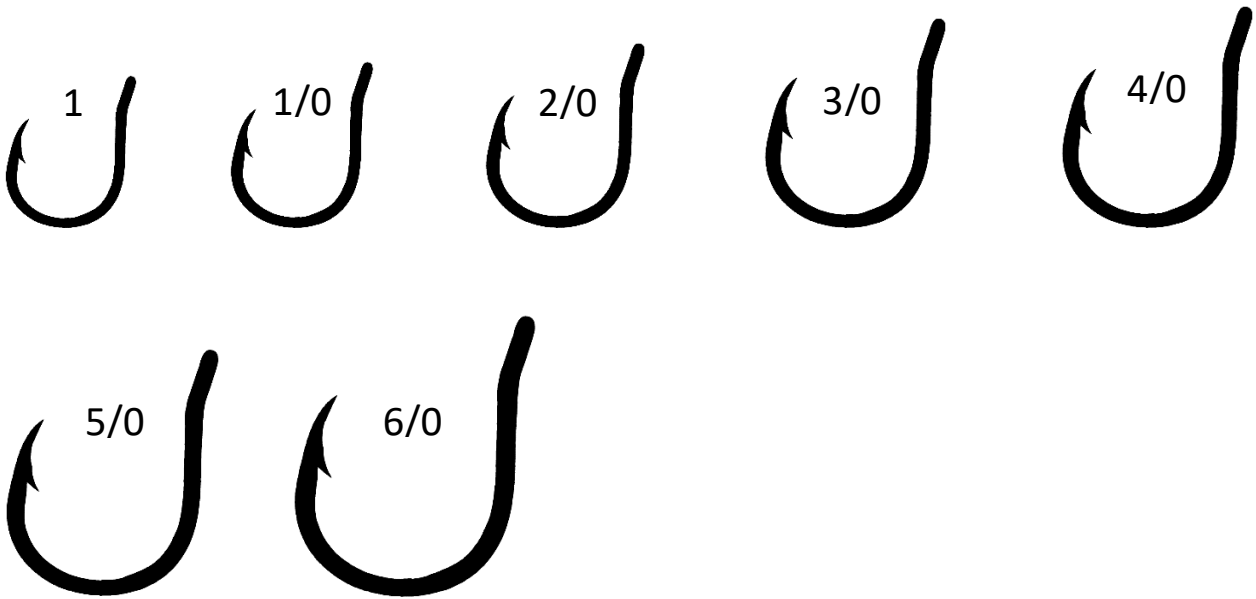

This special cold forged straight knurl is strategically formed and well-spaced in respects to various types of mono materials and diameters, it allows a tighter and stronger mono grip to prevent slip.

NAKED-POINT PLATING

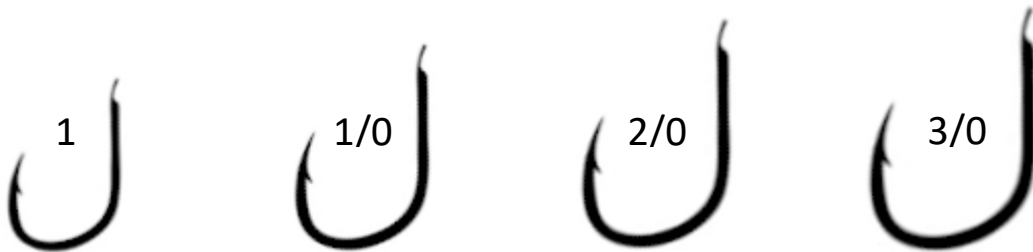

This automobile-industry plating technology has enhanced the smoothness and shininess of the hook. The eye-catching exotic color pigments and coating chemicals are specifically formulated to achieve the exquisite and aesthetic appearance for the ever-demanding anglers. Its luster will stay longer, but most importantly its hook point remains “uncoated” – so no additional coating material thickness is added to the point thus preserving the sharpness. Most popular colors available are:

- **RED**
- **PINK**
- **BLUE**
- **BLACK**
- **GREEN**
- **PURPLE**
- **YELLOW**

Live Bait GW20220

Koiso Gure GW20221

Inline Large Eyed GW20229

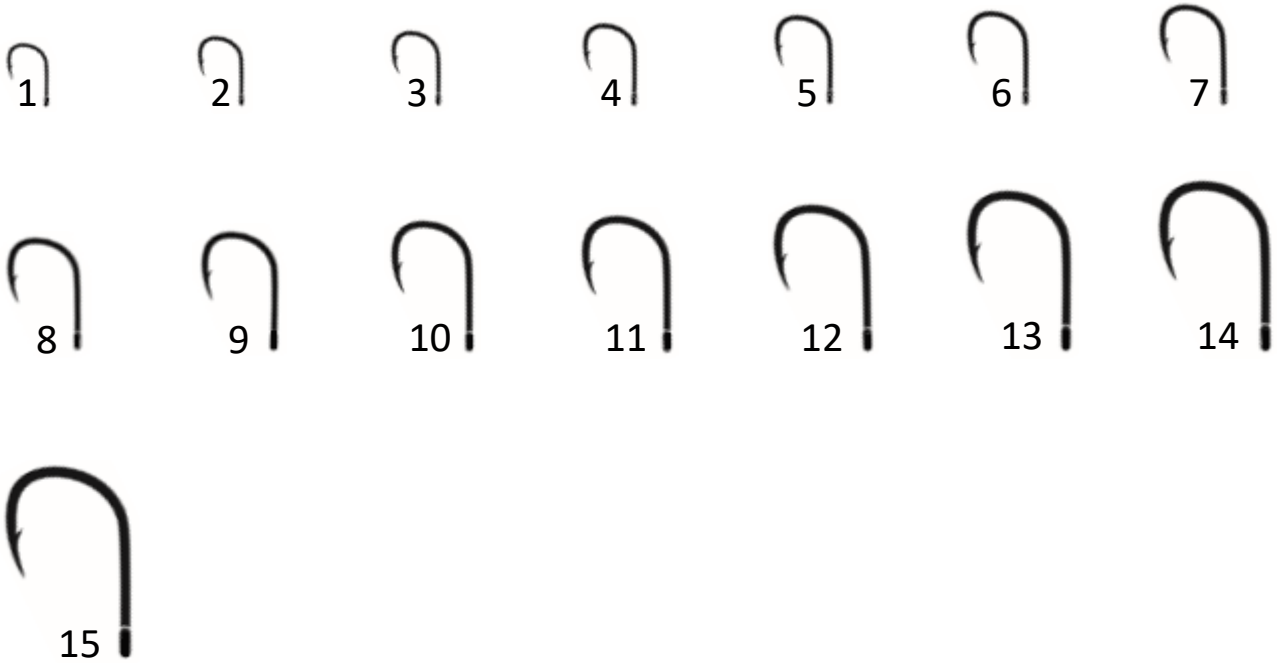

Ringed Chinu GW20223 / GW20242 / GW20243

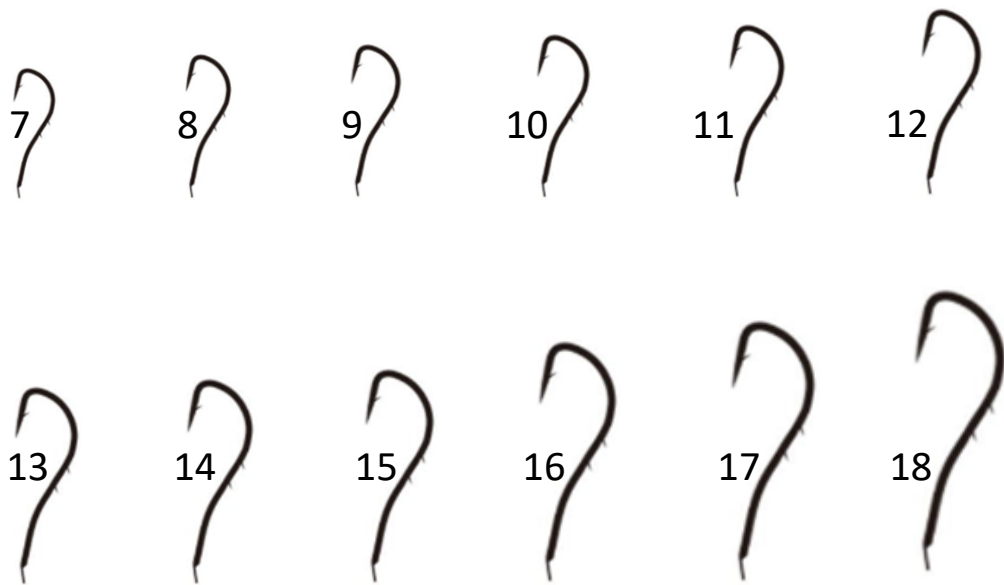

Ringed Izumezina GW20227

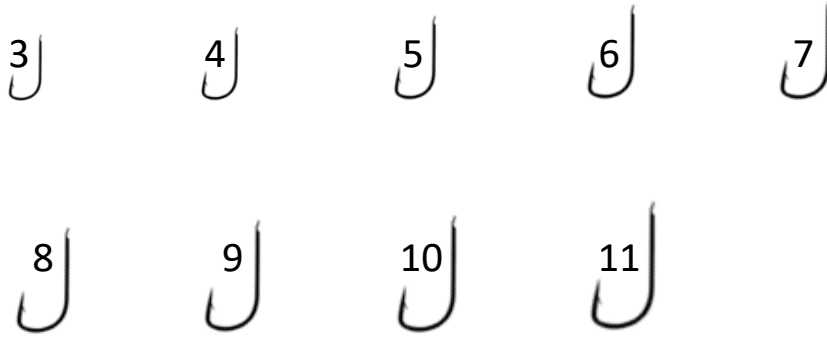

Ringed Iseama GW20228 / GW20244

Ryusen-Kentsuki GW20222
